

Family support, when plans change

A cancelled afternoon leaves
two commitments to recover.

Created by Shivam Gupta

Alexa+ primary track. Fictional household shown.

A workable split between helpers

Maya cannot help this afternoon. Both commitments need a replacement.

Helper	Availability and capabilities	Planner proposal
Maya	Unavailable all afternoon	Reassign both tasks
Jo	Home access 14:00-15:00 Cannot drive	Bag 14:30-14:45
Dev	Available from 14:45 Can drive	Ride 15:00-16:00

The proposed split respects time, home access, driving, and the bag prerequisite.

Commitment states

The named helper accepts the offer. The prerequisite controls when work can start.

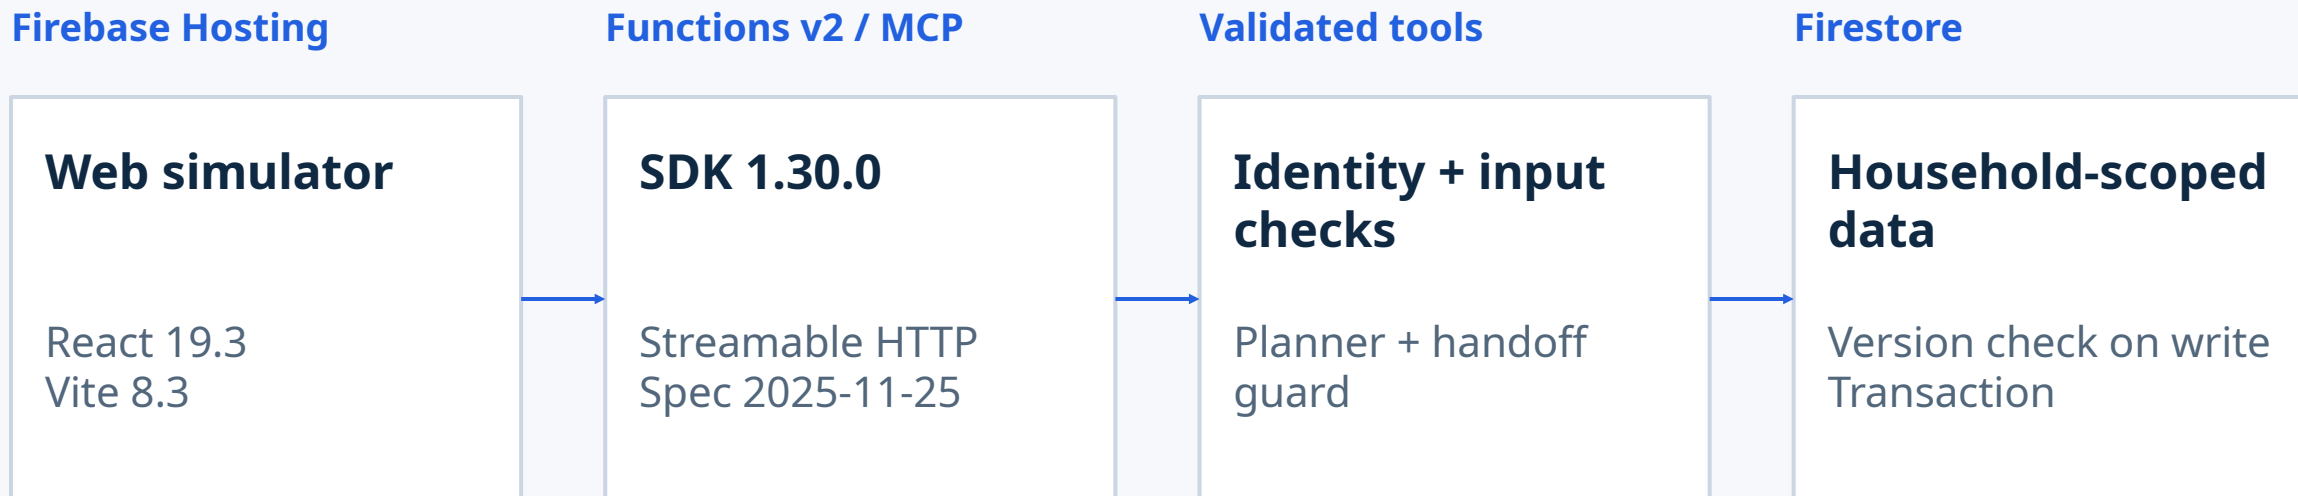

Accepted ride waits for the bag

A brief acknowledgment records the plan version the helper read.

Shared rules behind the workflow

Web simulator and external MCP clients use the same validated workflow.

Firebase email/password sign-in and one-time helper invitations.

Deterministic language simulation. Live Alexa+ onboarding remains a next step.

Where KindHandoff fits

Care calendars, voice notes, and handoff summaries already exist.

Alternative	Published strength
Caring Village	Care calendar, shared tasks, and an AI assistant
Family CareRelay	Confirmed voice entries and handoff summaries
Group chat + calendar	Familiar tools the household already uses

KindHandoff focuses on repairing disrupted commitments

Published feature comparison. We have not established that this workflow is exclusive.

A household subscription to test

The first customer coordinates recurring practical support for a parent.

\$12

per household / month

Pricing hypothesis

Every helper included

Charging per helper would discourage participation.

Deterministic core rules keep paid model calls optional.

Planned household validation

Adoption depends on helpers participating, not only the coordinator signing in.

10

Planned interviews

Coordinators, helpers, and adults receiving support

5

Planned households

Four-week pilot after a baseline diary

Primary measure: time to an accepted replacement

Also measure follow-up effort, repeated helper use, and voluntary paid continuation.

The bag-to-ride demo

One cancellation, a feasible split, and responsibility each helper accepts.

Demo and next steps
